

Metalam™

Metalam™ letters are a cost-effective alternative to the solid metal letter. Metalam™ letters have a genuine Chemetal™ face, adhered to solid acrylic using a high-pressure thermal lamination technique. The high-pressure thermal lamination yields an extremely strong, superior bond, making these letters tough but lightweight. Sides are painted to match. Metalam™ can be used in many interior signage applications, including letters, logos and plaques.

Chemetal™ 900 Series:
